FOREWORD

The statistics presented in Volume IV of the Reports on Population, Sixteenth Decennial Census, are based on data from the Census of Population, taken as of April 1, 1940.

This volume, printed in four parts, presents the general characteristics of the population cross-classified by age for the United States and includes data for the States, arranged alphabetically, together with a summary for the United States as a whole. Part 1 constitutes a summary for the United States. Part 2 presents statistics for the States from Alabama to Louisiana; Part 3, from Maine to North Dakota; and Part 4, from Ohio to Wyoming.

The material was first published in a series of State bulletins, each entitled "Population, Fourth Series, Characteristics by Age." These bulletins, with a few minor corrections, have been assembled together as sections of the present volume.

An outline of the statistics presented in each State section is provided in the "Introduction" which precedes the section for the first State shown in this part of Volume IV. These introductory materials, consisting largely of definitions of terms and explanations, are reproduced here exactly as they appeared in the individual State bulletins. A somewhat more extensive discussion is presented in Part 1 of this volume.
